

Date: 07-11-2024**Ex.no: 13****WORKING WITH TRIGGER****Program 1**

Write a code in PL/SQL to develop a trigger that enforces referential integrity by preventing the deletion of a parent record if child records exist.

```
CREATE OR REPLACE TRIGGER prevent_parent_deletion
BEFORE DELETE ON employees
FOR EACH ROW
DECLARE   pl_dept_count NUMBER;
BEGIN SELECT
COUNT(*)
      INTO pl_dept_count
      FROM department
      WHERE dept_id = :OLD.employee_id;
      IF pl_dept_count > 0 THEN
          RAISE_APPLICATION_ERROR(-20001, 'Cannot delete employee record as
department records exist. '); END IF;
END;

DELETE FROM employees
WHERE employee_id = 70;
```

Program 2

Write a code in PL/SQL to create a trigger that checks for duplicate values in a specific column and raises an exception if found.

```
CREATE OR REPLACE TRIGGER prevent_duplicate_manager_id
BEFORE INSERT OR UPDATE ON employees
FOR EACH ROW
DECLARE    pl_count
NUMBER; BEGIN
    SELECT COUNT(*)
    INTO pl_count
    FROM employees
    WHERE manager_id = :NEW.manager_id AND employee_id
    != :NEW.employee_id;
    IF pl_count > 0 THEN
        RAISE_APPLICATION_ERROR(-20003, 'Duplicate manager_id found: ' ||
:NEW.manager_id); END
    IF;
END;

INSERT INTO employees (employee_id, first_name, last_name, email, phone_number,
hire_date, job_id, salary, commission_pct, manager_id, department_id)

'john006@gmail.com',7383922241,'11/9/2000','ST_CLERK',10000,0.15,400,80);
```

```
SQL> CREATE OR REPLACE TRIGGER restrict_salary_insertion

SQL> IF (total_salary + :NEW.salary) > threshold THEN
SQL> RAISE_APPLICATION_ERROR(-20004, 'Insertion denied: Total salary exceeds the
SQL> threshold of ' || threshold); END IF;
SQL> END;
```

Program 3

Write a code in PL/SQL to create a trigger that restricts the insertion of new rows if the total of a column's values exceeds a certain threshold.

```
CREATE OR REPLACE TRIGGER restrict_salary_insertion
```

```
BEFORE INSERT ON employees
```

```
FOR EACH ROW
```

```

```

```
total_salary NUMBER; threshold NUMBER
```

```

```

```
SELECT SUM(salary)
```

```
INTO total_salary
```

```
FROM employees;
```

```
IF (total_salary + :NEW.salary) > threshold THEN
```

```
RAISE_APPLICATION_ERROR(-20004, 'Insertion denied: Total salary exceeds the
threshold of ' || threshold); END IF;
```

```
END;
```

```

Program 4

Write a code in PL/SQL to design a trigger that captures changes made to specific columns and logs them in an audit table.

```
CREATE OR REPLACE TRIGGER audit_changes
AFTER UPDATE OF salary, job_id ON employees
FOR EACH ROW
BEGIN
```

```
IF :OLD.salary != :NEW.salary OR :OLD.job_id != :NEW.job_id THEN
```

```

Program 5

Implement a trigger that records user activity (inserts, updates, deletes)
in an audit log for a given set of tables.

```
CREATE OR REPLACE TRIGGER trg_audit_employees

Program 7

Implement a trigger that automatically calculates and updates
a running total column for a table whenever new rows are inserted.

```
CREATE TABLE transactions (  
    transaction_id NUMBER PRIMARY KEY,  
    amount NUMBER,    running_total  
    NUMBER  
);
```

```
CREATE OR REPLACE TRIGGER update_running_total  
FOR INSERT ON transactions
```

COMPOUND TRIGGER

```
TYPE amount_array IS TABLE OF NUMBER INDEX BY PLS_INTEGER; new_amounts
amount_array;
```

BEFORE EACH ROW IS

```
BEGIN      new_amounts(:NEW.transaction_id)      :=
      :NEW.amount;
END BEFORE EACH ROW;
```

AFTER STATEMENT IS

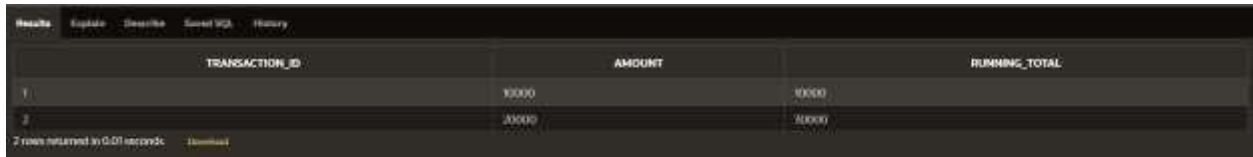

```
BEGIN
      DECLARE      v_total
      NUMBER;
      BEGIN
      SELECT NVL(MAX(running_total), 0)
      INTO v_total
      FROM transactions;

      FOR i IN new_amounts.FIRST .. new_amounts.LAST LOOP v_total :=
      v_total + new_amounts(i); UPDATE transactions
      SET running_total = v_total
      WHERE transaction_id = i;
      END LOOP;
      END;
      END AFTER STATEMENT;

      END update_running_total;
```

```
INSERT INTO transactions (transaction_id, amount) VALUES  
(1, 10000);
```

```
INSERT INTO transactions (transaction_id, amount)  
VALUES (2, 20000);
```

The screenshot shows a database query result with the following columns: TRANSACTION_ID, AMOUNT, and RUNNING_TOTAL. The first row shows transaction_id 1 with an amount of 10000 and a running total of 10000. The second row shows transaction_id 2 with an amount of 20000 and a running total of 30000. The interface includes tabs for Results, Explain, Describe, Select SQL, and History. At the bottom, it indicates '2 rows returned in 0.01 seconds' and has a 'Download' button.
